

A secure and comprehensive content management application on Amazon AWS cloud for an enterprise on the go!

A mission critical enterprise one team is driven by content.

ACVITS is a reliable, secure, scalable, and intuitive document management system.

It's no big a surprise that the way we manage and share our documents and files has transformed dramatically over the last decade. As such, the demand for highly secure and personalized experiences have never been greater.

Document Management Systems are evolving rapidly. With digital innovations driving business transformation, it is important to meet the rising demands of the new-age connected enterprise.

For businesses on-the-go, enterprise collaboration with a multitude of documents, files and resource management are a pressing need. To add to this, a **very-reliable and optimally-secure platform** for content management are key factors in deciding on the right solution.

That's where ACVITS fits the bill. Fits to a T, in fact.

Read more to know about some of the key business challenges that ACVITS addresses and a host of features we bring to meet your content management needs.

Why ACVITS

Here's what ACVITS has in store for digitally progressive enterprises like you ...

Centralized Document Repository

ACVITS supports all file types like document, photos, videos and engineering drawings including very large files, sizing up to 5 TB. A centralized access with keyword tagging and search makes it easy for quick access, saving time and hours.

Customizable Workflows NEW

With an integrated workflow management, Content Admins can create multiple workflows and assign different reviewers and an automated escalation based on lead-times for reviews. Reviewers can reject documents by adding comments, and the audit trail is available for tracking changes.

Enterprise Collaboration

A cloud-based CMS offers the opportunity to collaborate on content across an organization from a single portal. Team members can work from home or in office and CMS ensure secure and easy digital asset management. With private, public and group sharing features, enterprise users find ACVITS a great platform.

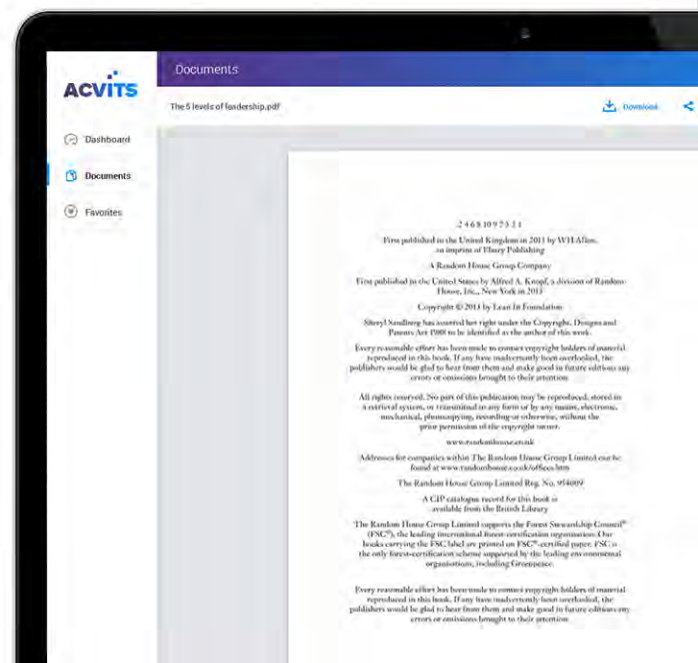

Document Migration made Easy

Move folders with large number of files and subfolders from your local system to ACVITS at ease. You can quickly drag and drop files to folders or use the bulk upload feature.

Enhanced Security with Encryptions

With SSL (Secure Socket Layer), 2FA (two-factor authentication), AES 256 encryption and your own private AWS cloud with a choice of security protocols, ACVITS is the optimal solution with multiple layers of security for enterprise content management. Amazon S3 Server side Encryption (SSE) enables to encrypt data stored at rest in S3 storage buckets.

Litigation Hold

As a Content Administrator, you can control the document removal by adjusting retention period, trash purge and audit log. The settings would help organization to keep documents and retain audit logs in support of litigation requirements.

Audit Logs and Reports

Content Admin can track user activities and view reminder reports and document purge reports within ACVITS. The extensive activity log aids in auditing, staff accountability, and keeping your content management system secure and in compliance with regulations.

Search and Versioning

Documents can be tagged with multiple keywords for quick and easy search. The Document details window will also display a version history for easy tracking.

Robust and Modular Architecture

ACVITS is built on a full-stack platform with Node JS, MongoDB and Angular JS. Together with powerful Amazon AWS cloud architecture, ACVITS offers dynamic scalability and customizable modules for an enterprise on-demand.

User Access Privileges

We understand that permissions can vary based on the roles and profiles in an enterprise. ACVITS allows Content Admins to create new roles and set access privileges to allow or restrict usage. In addition, Content Admins can create groups and then add users to them. By doing so, the Content Admin can control permissions for documents and files for bulk users with ease. Group level controls are available for all permissions like create, edit, share etc.

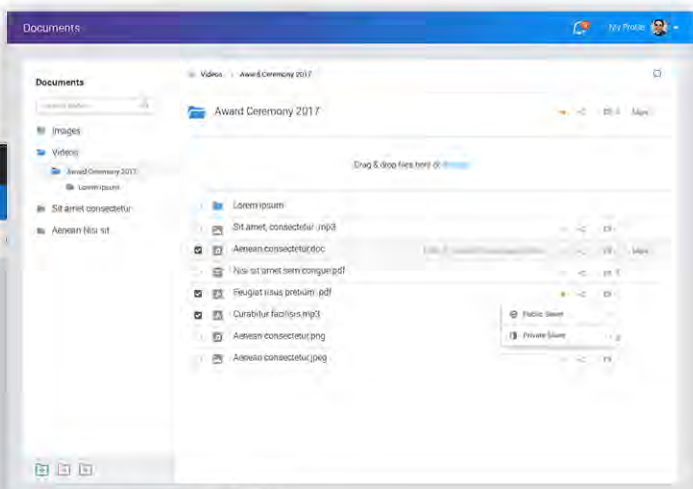

Turnkey Support

ACVITS team will ensure to provide you 24/7 continued support and help you induct very comfortably into the system. Our supportive staff can be reached out to help you with the product.

Integrated portal and social media publish

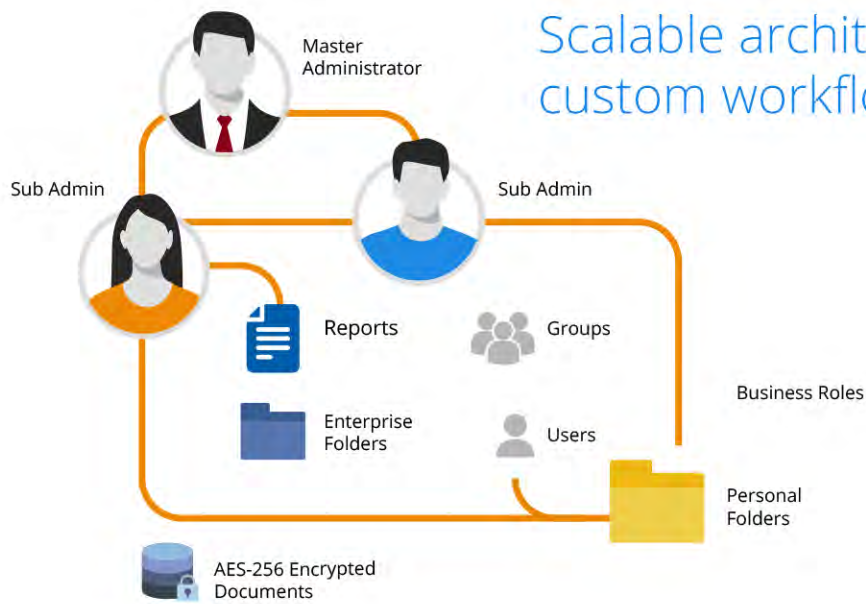

A document approved through workflow can be shared to public with a set life time. You can post the public link at your social media sites. The document public link becomes invalid when the set life time expires. You can use this feature for job posting or time bound sale.
